WHAT IS CLAIMED IS:

- 1. A locking device for an extension pipe for removably connecting the extension pipe to an operation handle, comprising:
- a holder connected to the operation handle, and having a locking hole formed on one side, to correspond to a fixing hole formed on the operation handle; and
- a locking/unlocking lever having a hook portion movable into and out of the locking hole, and a button portion formed opposite to the hook portion along the diameter, the locking/unlocking lever movable between a locked position and an unlocked position, a locked position in which the hook portion is inserted into the locking hole, and an unlocked position in which the hook portion is escaped out of the locking hole.
- 2. The locking device of claim 1, wherein the button portion is disposed such that a force for unlocking is applied in the same direction as the holder separating direction.
- 3. The locking device of clam 1, wherein the button portion and the hook portion are disposed opposite to the hinge pins along the length of the locking/unlocking

lever.

4. The locking device of clam 1, wherein an elastic portion is formed on opposite locations of the locking/unlocking lever so as to secure the locking/unlocking lever in the locked position by an elastic contact with the outer circumference of the holder.
